# ***Pairing Positive and Negative To Fill the Hole in the Heart***

**FACES Conference  
La Jolla, 2012**

**Rick Hanson, Ph.D.**

The Wellspring Institute for Neuroscience and Contemplative Wisdom

[WiseBrain.org](http://WiseBrain.org) [RickHanson.net](http://RickHanson.net)

# Topics

---

- **Memory consolidation**
- **Pairing positive and negative**
- **Antidote experiences**

# Memory Consolidation

# The Machinery of Memory

---

- When explicit or implicit memory is reactivated, it is rebuilt from schematic elements, not retrieved as a whole.
- When attention moves on, elements of the reactivated memory get reconsolidated.
- The open processes of memory reactivation and reconsolidation create a window of opportunity for shaping your internal world.

# Reshaping Negative (Implicit and Explicit) Memories

---

- Reactivated material associates with other things in awareness (e.g., thoughts, sensations), especially if they are prominent and lasting.
- When this material goes back into storage, it takes these associations with it.
- Therefore, you can imbue implicit and explicit memories with positive associations.

# Pairing Positive and Negative

# The Fourth Step of TIG

---

- When you are having a positive experience:
  - Sense the current positive experience sinking down into old pain, and soothing and replacing it.
- When you are having a negative experience:
  - Bring to mind a positive experience that is its antidote.
- In both cases, have the positive experience be big and strong, in the forefront of awareness, while the negative experience is small and in the background.
- You are not resisting negative experiences or getting attached to positive ones. You are being kind to yourself and cultivating positive resources in your mind.

# TIG4 Capabilities, Resources, Skills

---

## ■ Capabilities:

- Dividing attention
- Sustaining awareness of the negative material without getting sucked in (and even retraumatized)

## ■ Resources:

- Self-compassion
- Internalized sense of affiliation

## ■ Skills:

- Internalizing “antidotes”
- Accessing “the tip of the root”

# Neuropsychology of TIG4

---

- Extinction, through pairing a negative experience with a powerful positive one.
- Reinforces maintaining PFC-H activation and control during A-SNS arousal, so PFC-H is not swamped or hijacked
- Reinforcement of self-directed regulation of negative experiences; enhances sense of efficacy
- Dampens secondary associations to negative material; that reduces negative experiences and behavior, which also reduces vicious cycles
- Reduces defenses around negative material; thus more amenable to therapeutic help, and to insight

# **Antidote Experiences**

# Psychological Antidotes

---

## Approaching Opportunities

- Satisfaction, fulfillment --> Frustration, disappointment
- Gladness, gratitude --> Sadness, discontentment, “blues”

## Affiliating with “Us”

- Attunement, inclusion --> Not seen, rejected, left out
- Recognition, acknowledgement --> Inadequacy, shame
- Friendship, love --> Abandonment, feeling unloved or unlovable

## Avoiding Threats

- Strength, efficacy --> Weakness, helplessness, pessimism
- Safety, security --> Alarm, anxiety
- Compassion for oneself and others --> Resentment, anger

# The Tip of the Root

---

- For the fourth step of TIG, try to get at the youngest, most vulnerable layer of painful material.
- The “tip of the root” is commonly in childhood. In general, the brain is most responsive to negative experiences in early childhood.
- Prerequisites
  - Understanding the need to get at younger layers
  - Compassion and support for the inner child
  - Capacity to “presence” young material without flooding

# TIG and Trauma

---

- General considerations:
  - People vary in their resources and their traumas.
  - Often the major action is with “failed protectors.”
  - Cautions for awareness of internal states, including positive
  - Respect “yellow lights” and the client’s pace.
- The first three steps of TIG are generally safe. Use them to build resources for tackling the trauma directly.
- As indicated, use the fourth step of TIG to address the peripheral features and themes of the trauma.
- Then, with care, use the fourth step to get at the heart of the trauma.

*First of all, do no harm.*

---

*Keep a green bough in your heart,  
and a singing bird will come.*

Lao Tsu

# Great Books

---

See [www.RickHanson.net](http://www.RickHanson.net) for other great books.
