The Neurology of Awakening:

Using the New Brain Research to Steady Your Mind

Spirit Rock Meditation Center

Topics

- Foundations of mindfulness
- Bodyful of mind
- Self-compassion
- Concentration in contemplative practice
- Lateral networks of spacious awareness
- Steady and quiet
- Happiness, contentment, tranquility
Foundations of Mindfulness
Basics of Meditation

- Relax
- Posture that is comfortable and alert
- Simple good will toward yourself
- Awareness of your body
- Focus on something to steady your attention
- Accepting whatever passes through awareness, not resisting it or chasing it
- Gently settling into peaceful well-being
Mindfulness Factors

- Setting an intention
- Relaxing the body
- Feeling caring and cared about
- Feeling safer
- Opening to gratitude and other positive emotion
- Receiving the fruits of practice into yourself
Neural Basis of Mindfulness Factors

- **Intention** - “top-down” frontal, “bottom-up” limbic
- **Relaxation** - parasympathetic nervous system (PNS)
- **Caring** - social engagement system, vagus nerve, PNS
- **Safety** – calms amygdala alarms, reduces stress and vigilance
- **Positive emotion** - dopamine, norepinephrine, opioids: calming, motivating, wakeful, increasing internalization
- **Internalization** – learning, developing, cultivating
Bodyful of Mind
Mental activity entails underlying neural activity.
“Ardent, Diligent, Resolute, and Mindful”
Repeated mental activity entails repeated neural activity.

Repeated neural activity builds neural structure.
Neurons that fire together, wire together.
Effects of Meditation on the Brain

- Increased gray matter in the:
  - **Insula** - interoception; self-awareness; empathy for emotions
  - **Hippocampus** - visual-spatial memory; establishing context; inhibiting amygdala and cortisol
  - **Prefrontal cortex** (PFC) - executive functions; attention control

- Reduced cortical thinning with aging in insula and PFC

- Increased activation of left frontal regions, which lifts mood

- Increased gamma-range brainwaves - may be associated with integration, “coming to singleness,” “unitary awareness”

- Preserved telomere length
Fox, et al., 2016, Neuroscience and Biobehavioral Reviews, 65, 208-228
The Opportunity

We can use the mind

To change the brain

To change the mind for the better

To benefit ourselves and other beings.
Know the mind.

Shape the mind.

Free the mind.
Self-Compassion
The root of Buddhism is compassion, and the root of compassion is compassion for oneself.

Pema Chodron
If one going down into a river, swollen and swiftly flowing, is carried away by the current -- how can one help others across?

The Buddha
Self-Compassion

Compassion is the wish that a being not suffer, combined with sympathetic concern. Self-compassion simply applies that to oneself. It is not self-pity, complaining, or wallowing in pain.

Studies show that self-compassion buffers stress and increases resilience and self-worth.

But self-compassion is hard for many people, due to feelings of unworthiness, self-criticism, or “internalized oppression.” To encourage the neural substrates of self-compassion:

- Get the sense of being cared about by someone else.
- Bring to mind someone you naturally feel compassion for.
- Then shift the compassion to yourself, perhaps with phrases like: “May I not suffer. May the pain of this moment pass.”
Compassion for Yourself

Let’s try it . . .
Concentration
In Contemplative Practice
The Three Pillars of Practice

- Virtue (sila) - expressing natural goodness, restraining what’s harmful to oneself and others

- Concentration (samadhi) - mindfulness, steadiness of mind, meditative absorption

- Wisdom (panna) - insight, understanding the Four Noble Truths

- A path of practice in which one both uncovers the true nature that is already present, and purifies and transforms the mind and heart

- The path itself is its own reward. And it ultimately culminates in enlightenment and complete freedom from suffering.
The Importance of Concentration

- We’ll focus on one aspect of one pillar: meditative depth.

- That aspect has often been under-emphasized as Buddhism came to the West.

- But strong concentration is recommended by the Buddha and traditional teachers. It brings heft to insight, strengthens the will, and purifies the mind.

- The Noble Eightfold Path includes Wise Concentration, which consists of the four jhanas: profound states of meditative absorption.

- We’re not teaching the jhanas, but how to nourish the brain states that support their five mental factors.
Concentration is the proximate cause of wisdom.

Without concentration, one cannot even secure one’s own welfare, much less the lofty goal of providing for the welfare of others.

Acariya Dhammapala
Right Concentration

And what, friends, is right concentration? Here, quite secluded from sensual pleasures, secluded from unwholesome states, a person enters upon and abides in the first jhana, which is accompanied by applied and sustained thought, with rapture and pleasure born of seclusion.

With the stilling of applied and sustained thought, the person enters upon and abides in the second jhana, which has self-confidence and singleness of mind without applied and sustained thought, with rapture and pleasure born of concentration.

With the fading away as well of rapture, the person abides in equanimity, and mindful and fully aware, still feeling pleasure with the body, enters upon and abides in the third jhana, on account of which noble ones announce: ‘He or she has a pleasant abiding who has equanimity and is mindful.’

With the abandoning of pleasure and pain, and with the previous disappearance of joy and grief, he or she enters upon and abides in the fourth jhana, which has neither-pain-nor-pleasure and purity of mindfulness due to equanimity. This is called right concentration.

The Buddha
The Jhana Factors

- **Applied attention** – bringing it to bear
- **Sustained attention** – staying with the target
- **Joy** – happiness, contentment, and tranquility
- **Rapture** – great interest in the target, bliss
- **Singleness** – unification of awareness
Cultivating Vipassana

- Insight is the ultimate aim.

- Insight is nourished by stable, quiet, collected, and concentrated states . . . of the brain.

- Liberating insight - and Nibbana itself - is the fruit of virtue, wisdom, and contemplative practice.

Even if the ripe apple falls ultimately by grace,

its ripening depended upon

the watering, feeding, protecting, and shaping of its tree.
Penetrative insight

joined with calm abiding

utterly eradicates

afflicted states.

Shantideva
Heartwood

This spiritual life does not have gain, honor, and renown for its benefit, or the attainment of moral discipline for its benefit, or the attainment of concentration for its benefit, or knowledge and vision for its benefit.

But it is this unshakable liberation of mind that is the goal of this spiritual life, its heartwood, and its end.

The Buddha
Lateral Networks of Spacious Awareness
Self-Focused (blue) and Open Awareness (red) Conditions (in the novice, pre MT group)

Self-Focused (blue) and Open Awareness (red) Conditions (following 8 weeks of MT)

Ways to Activate Lateral Networks

- Relax.
- Focus on bare sensations and perceptions.

- Sense the body as a whole.
- Take a panoramic, “bird’s-eye” view.

- Engage “dont-know mind”; release judgments.
- Don’t try to connect mental contents together.
- Let experience flow, staying here now.

- Relax the sense of “I, me, and mine.”
Whole Body Awareness

- Involves insula and middle parietal lobes, which integrate sensory maps of the body, plus right hemisphere, for holistic (gestalt) perception

- Practice
  - Sense the breath in one area (e.g., chest, upper lip)
  - Sense the breath as a whole: one gestalt, percept
  - Sense the body as a whole, a whole body breathing
  - Sense experience as a whole: sensations, sounds, thoughts . . . all arising together as one unified thing

- This sense of the whole may be present for a second or two, then crumble; just open up to it again.
Abiding as a Whole Body Breathing

Let’s try it . . .
Steady and Quiet
A Road Map from the Buddha

The Buddha described a progressive process in which:
…*the mind is steadied internally, quieted, brought to singleness, and concentrated* - Anguttara Nikaya 3:100 - leading to liberating insight.

- **Steadied internally** – absorption in the object of attention
- **Quieted** – tranquility, little verbal or emotional activity
- **Brought to singleness** – sense of wholeness, minimal thought, unification of awareness as a single gestalt continuously
- **Concentrated** – the jhanas or related non-ordinary states of consciousness; great absorption; powerful sense of joy, rapture, equanimity
Steadied Internally

- Pick an object of attention.
- Apply and sustain attention to it.
- Give over to it, surrender to it: “Be devoted to it and renounce all else.”
- Be aware of boredom, discontent with the moment as it is, hunger for stimulation.
- Stay alert to mind wandering and disengage quickly, returning to the object of attention.
Let’s move around a bit . . .
Quieted

- “Tranquilize the body.”
- Disengage from strain, stress, striving.
- Disengage from verbal activity.
- “Tranquilize the feeling tone” – let “pleasant” and “unpleasant” settle down; be content with “neutral.”
- “Tranquilize perception” – let go of memory, conceptualizing; let yourself not know at the front edge of now.
- Rest in awareness like a still pond with few waves.
In the deepest forms of insight, we see that things change so quickly that we can’t hold onto anything, and eventually the mind lets go of clinging.

Letting go brings equanimity. The greater the letting go, the deeper the equanimity. In Buddhist practice, we work to expand the range of life experiences in which we are free.

U Pandita
Happiness, Contentment, Tranquility
Happiness

- Recognize that happiness is skillful means. Let yourself feel happy, in a broad sense.

- Other thoughts and feelings may occur alongside happiness; that’s all right.

- Bring to mind sources of gratitude and gladness; encourage happiness.

- Explore happiness about the welfare of others.

- Take happiness as your object of attention; rest in a global sense of happiness.
Contentment

- Let happiness settle into contentment: well-being with no wish for the moment to be other than it is.

- Let go of any disappointment, frustration, or striving; let any discontent fall away.

- Let there be a sense of fullness and enoughness.

- Take contentment as your object of attention; rest in a global sense of contentment.
Tranquility

- Let contentment settle into tranquility: a deep sense of ease, quiet, and peace.

- Do not follow thoughts, feelings, sensations; let them pass like the shadows of birds on a peaceful pond, leaving no trace behind.

- There may be a felt sense or intuition of a stillness underlying all mental phenomena.

- Take tranquility as your object of attention; rest in a global sense of tranquility.
This is peaceful, this is sublime:
The calming of all mental constructions,
he letting go of all supports,
the extinguishing of craving,
dispersion,
cessation,
Nirvana.

Neurobhavana
Two wolves in the heart
Major Buddhist Inner Strengths

Mindfulness  Compassion  View
Investigation  Kindness  Intention
Energy  Altruistic joy  Effort
Bliss  Virtue  Conviction
Tranquility  Wisdom  Generosity
Concentration  Equanimity  Patience
Inner Strengths Are Built From Brain Structure
The Activation/Installation Positive Cycle

States are temporary, traits are enduring.

Activated mental states are the basis for installed neural traits.

Positive traits foster positive states.

Activated states --> Installed traits --> Reactivated states --> Reinforced traits
Three ways to engage the mind:
- Be with it. Decrease negative. Increase positive.
- Let be. Let go. Let in.
- Mindfulness present in all three ways to engage mind

While “being with” is primary, it’s often isolated in mindfulness-based practices.

Skillful means for decreasing the negative and increasing the positive have developed over 2500 years. Why not use them?
