The Whole Holy Brain

Bay Area Integral
April 7, 2011

Rick Hanson, Ph.D.
The Wellspring Institute For Neuroscience and Contemplative Wisdom
drrh@comcast.net
Topics

- Self-directed neuroplasticity
- The integral brain: differentiation and integration
- Key integrative processes:
  - Allocentric processing
  - Lateral network activation
  - Equanimity
Self-Directed Neuroplasticity
Common - and Fertile - Ground

Neuroscience

Psychology

Contemplative Practice
When the facts change,  
I change my mind, sir.  

What do you do?  

John Maynard Keynes
A Neuron
Evolutionary History

The Triune Brain

The Triune Brain - (P. MacLean 1990)
CEREBRAL CORTEX STUFF
PLEASURE/PAIN CENTER STUFF
LIZARD BRAIN STUFF
Tibetan Monk, Boundless Compassion
There are three phases of psychological healing and personal growth (and spiritual practice):

- Be mindful of, release, replace.
- Let be, let go, let in.

Mindfulness is key to the second and third phase, sometimes curative on its own, and always beneficial in strengthening its neural substrates. But often it is not enough by itself.

And sometimes you need to skip to the third phase to build resources for mindfulness.
How to Take in the Good

1. Look for positive **facts**, and let them become positive **experiences**.

2. Savor the positive experience:
   - Sustain it for 10-20-30 seconds.
   - Feel it in your body and emotions.
   - Intensify it.

3. Sense and intend that the positive experience is **soaking** into your brain and body - registering deeply in emotional memory.
“Anthem”

Ring the bells that still can ring  
Forget your perfect offering  
There is a crack in everything  
That’s how the light gets in  
That’s how the light gets in

Leonard Cohen
The good life, as I conceive it, is a happy life. I do not mean that if you are good you will be happy; I mean that if you are happy you will be good.

Bertrand Russell
The Integral Brain
A SYNAPSE

- **Axon Terminal**
- **Presynaptic membrane**
  - Neurotransmitter released by exocytosis
- **Mitochondrion**
  - Produce ATP
- **Synaptic vesicles**
  - Contain neurotransmitter
- **Synaptic Cleft**
- **Postsynaptic membrane**
  - Has receptors for neurotransmitters
- **Dendrite of second neuron**
Egocentric and Allocentric
Egocentric Perspective

- Based on upper processing streams in the brain that involve: upper portions of the thalamus that confer “self” salience; rear regions of the “default network” (e.g., precuneus, posterior cingulate cortex); parietal regions that construct an enduring and unified sense of “my body in space”

- Establishes “where it is in relation to me”; lower visual field

- Develops earliest in childhood

- “Subjective” - Things exist in relation to me.

- Action-oriented - Focus on reacting to carrots and sticks
Allocentric Perspective

- Based on lower processing streams in the brain that involve: lower regions of the thalamus that confer “world” salience;

- Establishes “what it is independent of me”; upper visual field

- Begins developing around age four

- “Objective” - Things exist in a physical space in which their location is impersonal, not in reference to the viewpoint of an observer.

- This perspective pervades kensho and other forms of non-dual awareness. It is strengthened in open awareness meditations that draw heavily on the alerting, lower attentional system.

- Being-oriented
Strengthening Allocentric Processing

- As one perspective increases, the other decreases. Normal ego/allo fluctuations occur ~ 3-4/minute.

- With “contact,” allocentric processing increases briefly as the new stimulus is considered in its own right; then egocentric processing surges forward as one figures out what to do about the “feeling tone” (pleasant, unpleasant, neutral) of the stimulus.

- Open awareness practices in which there are many moments of new contact could incline the brain toward allocentric modes.

- Lower regions of the thalamus and its reticular cap - with concentrations of GABA neurons - inhibit egocentric processing.

- Reducing wanting reduces egocentric processing.
Liking and Wanting

- Distinct neural systems for liking and wanting

- In the brain: feeling tone --> enjoying (liking) --> wanting --> pursuing
  - Wanting without liking is hell.
  - Liking without wanting is heaven.

- The distinction between *chandha* (wholesome wishes and aspirations) and *tanha* (craving)

- But beware: the brain usually wants (craves) and pursues (clings) to what it likes.
No self,
no problem
Lateral Networks
Dual Modes

“Doing”
Focused attention
Goal-directed
Sense of craving
Personal, self-oriented perspective
Lost in thought, mind wandering
Conceptual
Future- or past-focused
Much verbal activity
Firm beliefs
Evaluative
Looping contents of mind
Tightly connected experiences
Focal view
Prominent self-as-object
Prominent self-as-subject

“Being”
Open awareness
Nothing to do, nowhere to go
Sense of peace
Impersonal, 3rd person perspective
Mindful presence
Sensory
Now-focused
Little verbal activity
Uncertainty, not-knowing
Nonjudgmental
Transient contents of mind
Loosely connected experiences
Panoramic view
Minimal or no self-as-object
Minimal or no self-as-subject
Increased *Medial* PFC Activation Related to Self-Referencing Thought

Self-Focused (blue) and Open Awareness (red) Conditions (in the novice, pre MT group)

Self-Focused (blue) and Open Awareness (red) Conditions (following 8 weeks of MT)
## Dual Modes

Ways to Activate “Being” Mode

- Relax.
- Focus on bare sensations and perceptions.
- Sense the body as a whole.
- Take a panoramic, “bird’s-eye” view.
- Engage “don’t-know mind”; release judgments.
- Don’t try to connect mental contents together.
- Let experience flow, staying here now.
- Relax the sense of “I, me, and mine.”
Whole Body Awareness

- Involves insula and mesial (middle) parietal lobes, which integrate sensory maps of the body, plus right hemisphere, for holistic (gestalt) perception.

- Practice
  - Sense the breath in one area (e.g., chest, upper lip)
  - Sense the breath as a whole: one gestalt, percept
  - Sense the body as a whole, a whole body breathing
  - Sense experience as a whole: sensations, sounds, thoughts . . . all arising together as one unified thing

- This sense of the whole may be present for a second or two, then crumble; just open up to it again.
Panoramic Awareness

- Recall a bird’s-eye view (e.g., mountain, airplane).

- Be aware of sounds coming and going in an open space of awareness, without any edges: boundless.

- Open to other contents of mind, coming and going like clouds moving across the sky.

- Pleasant or unpleasant, no matter: just more clouds

- No cloud ever harms or taints the sky.

Trust in awareness, in being awake, rather than in transient and unstable conditions.

Ajahn Sumedho
Equanimity
“Bahiya, you should train yourself thus.”

In reference to the seen, there will be only the seen. To the heard, only the heard. To the sensed, only the sensed. To the cognized, only the cognized.

When for you there will be only the seen in reference to the seen, only the heard in the heard, only the sensed in the sensed, only the cognized in the cognized, then, Bahiya, there’s no you in that.

When there’s no you in that, there’s no you there. When there’s no you there, you are neither here nor yonder nor between the two.

This, just this, is the end of all suffering.

The Buddha
Be wisdom itself, rather than a person who isn’t wise trying to become wise.

*Trust in awareness, in being awake, rather than in transient and unstable conditions.*

Ajahn Sumedho

**Ben Franklin’s Daily Schedule**
Empathy?
Thank you

Be still
Listen to the stones of the wall
Be silent, they try
To speak your

Name.
Listen to the living walls.
Who are you?
Who
Are you? Whose
Silence are you?

Thomas Merton
I am only one; but still I am one.
I cannot do everything, but still I can do something.
I will not refuse to do, the something I can do.

Helen Keller
